20.1 to 28.0	(a)	(a)	(a)	54	54	64	66	66	81
(a) Wave equation analysis. For design bearings under 355 kN, minimum diesel hammer energies listed may be reduced by 20% for concrete pile and 10% for steel pile.									

Table 2550.02-1: Fabric Form Minimum Property Requirements

Property	Test Method	Units	Armor Unit	Articulating Block Mat
Composition of Yarns			Nylon or Polyester	Nylon or Polyester
Mass Per Unit Area (double-layer)	ASTM D 5261	oz/yd ² (g/m ²)	14 (470)	12 (403)
Thickness	ASTM D 5199	Mils (mm)	28 (0.7)	25 (0.6)
Mill Width		In (m)	76 (1.92)	76 (1.92)
Wide-Width Strip Tensile Strength - Machine	ASTM D 4595	lbf/in (kN/m)	190 (33.2)	140 (24.5)
- Cross	ASTM D 4595	lbf/in (kN/m)	140 (24.5)	110 (19.3)
Elongation at Break - Machine	ASTM D 4595	%	20	20
- Cross	ASTM D 4595	%	30	30
Trapezoidal Tear Strength - Machine	ASTM D 4533	lbf (N)	180 (800)	150 (665)
- Cross	ASTM D 4533	lbf (N)	115 (510)	100 (445)
Apparent Opening Size (AOS)	ASTM D 4751	U.S. Std. Sieve (mm)	60 (0.250)	40 (0.425)
Flow Rate	ASTM D 4491	gal/min/ft ² (l/min/m ²)	50 (2035)	90 (3665)
Notes: a. Conformance of fabric to specification property requirements is based on ASTM D 4759. b. All numerical values represent minimum average roll values (i.e., average of test results from any sample roll in a lot shall meet or exceed the minimum values). Sample lots according to ASTM D 4354.				

Table 2552.02-1: Class II Material

Class	Type	Soil Group Symbol ASTM D 2487	Description	Percentage Passing Sieve Sizes			Atterberg Limits		Coefficients	
				1½ in. (37.5 mm)	No. 4 (4.75 mm)	No. 200 (75 µm)	LL	PI	Uni- formity C _u	Curva- ture C _c
II	Coarse-Grained Soils, clean	GW	Well-graded gravels and gravel-sand mixtures; little or no fines	100%	<50% of “Coarse Fraction”	<5%	Non Plastic	>4	1 to 3	
		GP	Poorly-graded gravels and gravel-sand mixtures; little or no fines.		<4			<1 or >3		
		SW	Well-graded sands and gravelly sands; little or no fines.		>6			1 to 3		
		SP	Poorly-graded sands and gravelly sands; little or no fines.		<6			<1 or >3		
	Coarse-Grained Soils, borderline clean to with fines	e.g. GW- GC, SP- SM	Sands and gravels which are borderline between clean and with fines.	100%	Varies	5% to 12%	Non Plastic	Same as for GW, GP, SW and SP

36	4134 (Natural Sand)	Floodable Backfill							100				0-2	12

Notes: (Gradations No. 2, 9, 15, 16, 17, 18, 24, 25, 26, 27, 28, 33, and 34 have been deleted)

1. For Section 4110, when the fine aggregate is sieved through the following numbered sieves - 4, 8, 16, 30, 50, and 100 - no more than 40% shall pass one sieve and be retained on the sieve with the next higher number.
2. When used in precast and prestressed concrete bridge beams, 100% shall pass the 1.00" sieve.
3. When compaction of material is a specification requirement, the minimum percent passing the No. 200 sieve is 6%.
4. See specifications for combination of gravel and limestone.
5. Unwashed air dried samples of crushed composite material shall be tested for gradation compliance except that no gradation determination will be made for material passing the No. 200 sieve.
6. The gradation requirement for the No. 8 sieve shall be 5% to 20% when recycled material is supplied.
7. For Section 4121 gravel, one fractured face on 30% or more of the particles retained on the 3/8 inch sieve. For Section 4123 gravel, one fractured face on 75% or more of the particles retained on the 3/8 inch sieve.
8. Crushed stone shall have 100% passing the 1½" sieve.
- ~~9. When granular backfill material is used in floodable applications, use gradation 35 or 36. When granular backfill material is used under flowable mortar, one of the following alternative materials shall be used: natural sand compliant with Section 4110 (except the percent passing the No. 200 sieve shall not exceed 4% or gravel, crushed stone, or crushed concrete meeting the gradation requirements of Section 4121.~~
10. Gradation limitations for the 30, 50, and 100 sieves shall not apply when slurry mixture is applied by hand lutes, such as for slurry leveling.
11. Maximum of 2.5% passing the No. 200 sieve allowed if generated from the parent material when documented production is 1% or less as determined by the Office of Materials.
12. When Producer gradation test results are used for acceptance, test results representing at least 90% of the material being produced shall be within the gradation limits and the average of all gradation results shall be within the gradations limits. Stockpiled material not meeting the criteria may, at the District Materials Engineer's discretion, be resampled using Materials I.M. 301 procedures. One hundred percent of the stockpile quality control and verification test results shall be within the gradation limits.

Notes: (Gradations No. 2, 9, 15, 16, 17, 18, 24, 25, 26, 27, 28, 33, and 34 have been deleted)

1. For Section 4110, when the fine aggregate is sieved through the following numbered sieves - 4.75 mm, 2.36 mm, 1.18 mm, 600 μ m, 300 μ m, and 150 μ m - not more than 40% shall pass one sieve and be retained on the sieve with the next higher number.
2. When used in precast and prestressed concrete bridge beams, 100% shall pass the 25 mm sieve.
3. When compaction of material is a specification requirement, the minimum percent passing the 75 μ m sieve is 6%.
4. See specifications for combination of gravel and limestone.
5. Unwashed air dried samples of crushed composite material shall be tested for gradation compliance except that no gradation determination will be made for material passing the 75 μ m sieve.
6. The gradation requirement for the 2.36 mm sieve shall be 5% to 20% when recycled material is supplied.
7. For Section 4121 gravel, one fractured face on 30% or more of the particles retained on the 9.5 mm sieve. For Section 4123 gravel, one fractured face on 75% or more of the particles retained on the 9.5 mm sieve.
8. Crushed stone shall have 100% passing the 37.5 mm sieve.
- ~~9. When granular backfill material is used in floodable applications, use gradation 35 or 36. When granular backfill material is used under flowable mortar, one of the following alternative materials shall be used: natural sand compliant with Section 4110 (except the percent passing the 75 μ m sieve shall not exceed 4%) gravel, crushed stone, or crushed concrete meeting the gradation requirements of Section 4121.~~
10. Gradation limitations for the (600 μ m, 300 μ m, and 150 μ m) sieves shall not apply when slurry mixture is applied by hand lutes such as for slurry leveling.
11. Maximum of 2.5% passing the 75 μ m sieve allowed if generated from the parent material when documented production is 1% or less as determined by the Office of Materials.
12. When Producer gradation test results are used for acceptance, test results representing at least 90% of the material being produced shall be within the gradation limits and the average of all gradation results shall be within the gradations limits. Stockpiled material not meeting the criteria may, at the District Materials Engineer's discretion, be resampled using Materials I.M. 301 procedures. One hundred percent of the stockpile quality control and verification test results shall be within the gradation limits.
