

TABLE K

Price Adjustment for Segregation Examples

Case I Visual Segregation – 1 sq. yd. or more / station

Case II Visual Segregation – 3 sq. yd. or more (total) / station

Case III Visual Segregation (Longitudinal Streaks) – 1 sq. yd. or more / station

Application of Price Adjustment

The price adjustment applies to the entire area defined by the length times the paving width where this condition exists. For example, if a **Case I** condition exists for a Surface Course, which was paved for a length of 20 stations, paver width at 12 ft., paving depth of 2 inches, and the unit price for HMA Surface mix at \$20.00 per ton:

$$\begin{aligned}
 \text{Price Adjustment} &= (20\%)(1/100)(20 \text{ stations})(100 \text{ ft./1 station})(2 \text{ in.})(1 \text{ ft./12 in.})(12 \text{ ft.}) \\
 &\quad (145 \text{ lbs./cu. ft.})(1 \text{ ton/2000 lbs.})(\$20.00/\text{ton}) \\
 &= \underline{\underline{\$1160.00}}
 \end{aligned}$$
